

You're invited to the WinEst 'Technology for Construction' Seminar

Date: April 9, 2010 - 8:00 a.m. - 12:00 p.m.

Location: Drexel University - **Cost:** Free!

A slow economy doesn't change the need for your company to be knowledgeable of the state-of-the-art estimating tools that are available for the AEC industry. In this four hour seminar you will be introduced to current technology that can dramatically improve your company's productivity.

During this free seminar you will also preview two new technologies currently in development by WinEst. One will allow you to further benefit from BIM (Building Information Modeling), and the other technology will introduce a powerful new way to integrate estimating and On-Center's On-Screen Takeoff software.

"The networking, educational content and location made this seminar a great event!"

Attendees will leave this seminar with an in-depth understanding of the following:

- How to leverage your company's project estimate or cost history to quickly and accurately create budgets. This valuable tool is for Owners, General Contractors, Construction Managers and Sub-contractors!
- How to mine the intelligence contained in the Building Information Model (BIM), to generate the 4th and 5th dimension; cost and time.
- How to easily maintain estimate revision history as your estimate passes through the critical milestones in the estimating and bidding process.
