

WinEst Pro Plus[®]

WinEst estimating software empowers the professional estimator to rapidly create, manage, and easily update project cost estimates. Save time, avoid errors, archive estimates, and customize your business documents by using WinEst Pro Plus.

WinEst Pro Plus is essential to efficient integrated estimating, cost information gathering, bidding and buying.

Unleash virtual access to your cost information and create faster and more accurate estimates. Pro Plus allows you to produce high quality, accurate estimates.

WinEst Version 11 will allow users to:

- More easily record and manage multiple price quotes from subcontractors and material suppliers
- Store both list price and sale price for each material item in the database (price book), a necessary pricing option for the manufacturing market segment
- More quickly query the cost database by allowing customers to filter their estimate by every field on an item record
- Utilize new Markup options, ie; new tax markups that support International requirements for "tax on tax" type calculations
- Take advantage of additional spreadsheet views and reporting options
- New preference settings allow for additional system customization

Additional WinEst Pro Plus features

Fully customizable toolbar & menus

Master Assemblies - Assemblies and sub-assemblies can now be driven by other assemblies.

Estimate specific Global Variables - Global Variables values are shared within the estimate and can be used in assembly or item formulas.

Database Search Capability- The browser search functionality has been expanded to include full Boolean search (AND, OR, and NOT) on all fields.

Item Database - 4 Level Hierarchical Headings - Items can be assigned to this user defined, 4 level hierarchy in the database, and can be optionally browsed for during item takeoff using 4 levels instead of 3 and handles the 2004 CSI MasterFormat.

Undo - There are two new Undo commands; one allows the user to undo the last change made on a particular Estimate Item and the other allows the user to undo the last change made to a particular field of an Estimate Item.

Scheduling Tasks - Task lists used for project scheduling are now system wide instead of estimate specific.

Spreadsheet style estimating

- Allows easy customization and greater analytical flexibility

Comprehensive audit trail

- Precisely track all changes and modifications with item level detail

Multiple document Interface

- Open multiple estimates at a time and easily drag & drop items between estimates

Takeoff

- Item takeoff
- Assembly takeoff
- Powerful item search capabilities

Estimate filtering

- Materials factor allows variable adjustments to prices by locality
- Customizable filters enhance analysis and reporting

Total page filter editing

- Editable filter based totals page for individualized report formatting

Multiple interfaces

- Scheduling: Microsoft Project and MPX output and Primavera P5 and P6
- Interfaces to the leading construction solutions
